

After reviewing the scientific study conducted by the Amateur Radio Relay League I must speak negatively concerning the Broadband Over Power Line (BPL), Docket - 03- 104. The studies clearly show the amount of noise created throughout the HF spectrum. This spectrum is heavily used by the amateur radio community as well as government and private operations for a variety of use. Some of the uses included established communications for emergencies, such during hurricanes, floods, tornado's, and other disasters. Even during the Sept 11th terrorist attack, communications was provided by the Amateur Radio community.

Allowing BPL would cause such a hinderance in the use of the HF spectrum that it would become nearly unusable. I respectfully request the FCC to \*NOT\* allow Broadband Over Power Line.
